PROJECTS

NotebookLM RAG - Chat With Your Documents

- **Tech Stack:** JavaScript (ES6+), Node.js, Express.js, LangChain, Groq Cloud (Llama 3.3 70B), Google AI Studio (Gemini text-embedding-004), Qdrant Cloud Vector DB, Multer, HTML5/CSS3.
- Engineered a full-stack Retrieval-Augmented Generation (RAG) assistant using Node.js and Express, implementing isolated modules for data ingestion, vector index orchestration, and LLM inference pipelines.
- Developed an asynchronous ingestion processor using LangChain to split PDFs/TXT files into 1000-character semantic chunks (20% overlap), generating 768-dimensional vectors via Gemini's (text-embedding-004) to index into a Qdrant Cloud cluster.
- Eliminated AI hallucinations by designing strict system prompts and low-temperature constraints (0.3) on Groq's Llama 3.3 model, coupled with a client-side session architecture (local Storage) to guarantee tenant-isolated database access.

Personachat - Persona Based AI Chatbot

- **Tech Stack:** HTML5, CSS3 (Glassmorphism Theme), JavaScript (ES6+), Vite, Node.js, Vercel Serverless Functions, and Google Gemini API (2.5 Flash / Lite).
- Engineered a full-stack chatbot simulating realistic industry expert personalities using a decoupled Vite and Vercel Serverless backend that secures sensitive infrastructure API keys server-side.
- Designed identity-first directives, conversation constraints, few-shot examples, and hidden Chain-of-Thought reasoning to accurately capture domain tone and mitigate character drift.
- Programmed serverless proxy handlers with an automated multi-model fallback orchestration mechanism across Gemini endpoints to bypass threshold blocks and guarantee uptime.

RIDESHARES - UBER Clone Backend Springboot Application

- **Tech Stack:** Java, Spring Boot, Spring Security, JSON Web Tokens (JWT), Spring Data JPA, Hibernate, Maven, and RESTful APIs.
- Engineered a high-performance ride-sharing backend using Spring Boot, utilizing a modular service-repository architecture to scale core domain logic.
- Implemented a stateless JWT authentication filter with Spring Security to securely validate bearer tokens and manage user sessions.
- Leveraged Spring Data JPA and Hibernate ORM to manage relational schema mappings and abstract complex database persistence layers.

SKILLS

Languages: Java, JavaScript (ES6+), Python, HTML/CSS

FrameWorks: Node.js, Express.js, Springboot

Backend & API: RESTful API Design, JWT Authentication, Role-Based Access Control

Databases: MySQL, PostgreSQL, MongoDB, Redis

System Design: Microservices Architecture, Caching Strategies, Database Design, High Availability, Kafka

Tools & Build: Git, GitHub, Postman, Render

EDUCATION

Birla Institute of Technology and Science, Pilani

Bachelor of Science (B.Sc) in Computer Science

2024 – 2027

Pilani, India

- **CGPA:** 8.32
- **Coursework:** Data Structures & Algorithm, Web Development, Databases, Computer System
